EVOLVING THINKING MINDS

A LEADING RESEARCH DRIVEN UNIVERSITY

My Restaurants Menu

Name :- Monish Kanojiya

UID :- U42000003845

Branch :- Diploma IT

Sem :- V

Guide Name : _____

More information and images:-
- You can add more information to your menu without making it hard to read. Hyperlinks and multiple pages allow users to navigate your menu and get more information only when they need it.
- You can also add images for each item on your menu to make it more appealing.

Promote any kind of menu :-

- Drinks.
- Menus for special occasions.
- Daily menus: Your users can see what's on the menu today, from any location, directly on their smartphone.

Better experience at the table :-

- The menu is always clean and sparkling: users can use their new smartphone to read the menu instead of an old menu that was used by many people.

- The menu is always available, during the whole meal, and the users don't need to ask the waiter to bring it: for example they can open the menu as soon as they sit or they can start reading about the desserts during the meal

Technology Use:-

- Front End : Html, CSS
- Back End : Javascript
- Database: My Sql
- Scripting Language:PHP

HTML   JS   CSS

Thank You
